# PANAMA

*Craft inspiration  
in a contemporary idiom.*

**Wire rod structures over which wicker is interwoven, provides the inspiration for this collection of outdoor furniture, approached from a contemporary design standpoint.**

Observing the collection in greater detail the similarity between the different forms of the rod structures belonging to the Panama series over which the wicker work is woven are easy to identify, whether that be the seating backrests or the bases for the tables. The inspiration is even more evident for the sofa and armchair backing because in their case a strap is woven between the rods in the lower areas in just the same way as wicker is used for hand made objects featuring this same natural fibre. A clear source of inspiration that is subtly expressed by being reinterpreted in a contemporary design language.

*The look of the Panama collection is characterised by the contrast between the lightness of the structures, a base of aluminium wire rods and the warmth of its substantial upholstered parts.*

The colours for the structures, the fabrics and the sizes of the various elements of the Panama collection can be customised using any one of the RAL colour card choices, as with the textiles and specific dimensions.

**Furniture for future.**

 CURE AND CLEANING

• Vinyl fabrics treated with PERMABLOK® require a minimum of maintenance to retain their good looks. Use soft soapy solutions or special cleaning products for vinyl fabrics to remove stains on the surface of the material. Remove only with a damp white cloth.  
 • Lacquers, strong cleaners, detergents, xylene-based solutions, acetone, or MEK cause immediate damage and contribute to the deterioration of the material. The use of such cleaners is at the owner's risk.  
 Certain dyes and accessory dyes (such as those used on denim jeans) may migrate to lighter colors. This phenomenon is increased by humidity and temperature and is irreversible.  
 SPRADLING International GmbH and EURO SPRADLING S.L.U. will not assume responsibility for dye transfer caused by external contaminants and possible permanent staining caused by this phenomenon.
