# TWIST

*An innovative  
contemporary revision  
of corded furniture.*

**The innovative material used for the hand crafted corded structure is the main element of this collection meticulously designed to evoke a sensation of weightlessness and visual lightness.**

Conceived in 2010 by British designer Mark Gabbertas the innovative design of the Twist collection has been instrumental in providing inspiration ever since, starting a trend in the use of an inventive acrylic fabrics for the corded element, inspired by the weave of traditional wicker baskets.

Twist is a collection offering a delicate and elegant contrast between the lightweight character of the pieces and the solidity of the volumes. The seating and the lounge feature the corded technique while the tables are provided with slim line tops that appear to be elevated above the legs, as if floating over them.

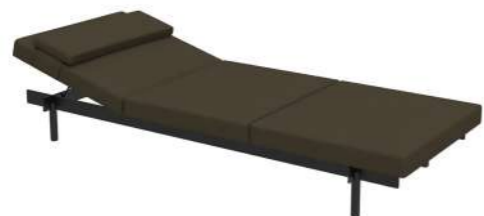

*The innovative acrylic fabric used in the creation of the double sided corded framework is stretched over both sides of the aluminium structures, somewhere between a cord and a strap in thickness.*

Twist is available in a series of set colours and sizes which OISIDE can customise in other tones and dimensions to order. The table tops can be selected in solid block colours or in natural stone finishes.

### CARE AND CLEANING

• Vinyl fabrics treated with PERMABLOK® require a minimum of maintenance to retain their good looks. Use soft soapy solutions or special cleaning products for vinyl fabrics to remove stains on the surface of the material. Remove only with a damp white cloth.

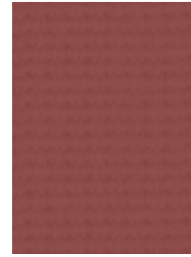

• Lacquers, strong cleaners, detergents, xylene-based solutions, acetone, or MEK cause immediate damage and contribute to the deterioration of the material. The use of such cleaners is at the owner's risk.

Certain clothing and accessory dyes (such as those used on denim jeans) may migrate to lighter colors. This phenomenon is increased by humidity and temperature and is irreversible. SPRADLING International GmbH and EURO SPRADLING S.L.U. will not assume responsibility for dye transfer caused by external contaminants and possible permanent staining caused by this phenomenon.
